

## DESCRIPTION

The next generation of Patented Turf Type Tetraploid Perennial Ryegrass has arrived. Double Time GLS shares all the same attributes that have made Double Time the most exciting turfgrass introduced into the market for decades. Double Time GLS has the same quick establishment, turf quality, drought tolerance, excellent winter color, wear tolerance, and now superior grey leaf spot resistance. Double Time GLS unique genetics and patented technology are a breakthrough for the turfgrass industry.

## APPLICATION

Double Time GLS is recommended for full sun/partial shade, home lawns, golf courses, landscapes and has become extremely popular with sports turf managers from the municipal level to the elites of the sports world. Double Time GLS quick establishment, deep set crown and slightly broader leaf blade make it the perfect nurse crop for slower establishing species. These characteristics make Double Time GLS a perfect choice for warm season golf course overseeding and as a component in permanent turf mixtures. Double Time GLS has also become TWCA qualified, passing its rigorous testing protocol making its performance consistent with ample or limited water application.

## PERFORMANCE

**Establishment:** Double Time GLS establishes quicker than all other turf grasses to form a healthy strand. Adding Double Time GLS to any mixture is ideal for spring and fall where establishment can be problematic.

**Winter Performance:** When fall arrives and temperatures drop, Double Time GLS will maintain its summer color all throughout the winter.

# GREEN GUARD

The Green Guard H2O series identifies turfgrasses with clear water conservation benefits. The seal is your guarantee that the grass seed has been tested by the Turfgrass Water Conservation Alliance (TWCA) and found to provide true water savings. Green Guard H2O series products have met a very stringent set of testing criteria

- assuring they will stay green with up to 40% less water
- saving water, fertilizer, time and money!

**| PURPOSE DRIVEN GENETICS**

## TWCA Turfgrass Water Conservation Alliance

Why? Because as the demand for water rises, the use of water for "non-essential" applications like landscapes, athletic fields, home lawns and other non-agricultural use is being highly scrutinized. Real water conservation measures are needed now, and are quickly becoming an important public concern, and one of the most important challenges to the turfgrass industry.

## Qualified Varieties

### Kentucky Bluegrass

- Mystere H2O
- Diva
- Apollo H2O

### Tall Fescue

- Falcon IV
- Falcon H2O

### Fine Fescue

- Miser CRF
- Culumbra II CHWF

### Perennial Ryegrass

- Double Time GLS
- Panther H2O
- Pennant H2O
