

Huia White Clover

Trifolium repens

Description

Huia is a medium leafed, popular variety of white clover from New Zealand. White Clovers are great forage plants and help keep the soil healthy with loads of nitrogen production. They don't grow well in dry conditions, but if happy and healthy will reseed well.

Application

White Clover is a high quality, cool season, short-lived perennial legume that is well adapted to all areas of the Northeast and Eastern Canada. Once established, grows rapidly and spreads via above ground stems or stolens. However, white clover has a shallow root system which makes it intolerant of droughty soils. It grows best during cool, moist weather on well-drained, fertile soils with a pH between 6 and 7. Because of its low growth habit, it is normally planted with a grass and used mainly for pasture.

Seeding and Management

Seeding Rate: 6 - 8 pounds per acre

Seeding Rate: 1 to 4 pounds per acre in a mix

Planting Depth: 1/4—1/2 inch

Features

- ✓ Excellent source of nitrogen
- ✓ Excellent seedling vigor
- ✓ High quality
- ✓ Well adapted Eastern Canada

Benefits

- ✓ Provides nitrogen for pasture grasses
- ✓ Improved forage quality
- ✓ Increases overall forage yield

Application

- ✓ Pasture mixtures
- ✓ Ideal for frost seeding

Seed Rate

680,000 seed/ lb

6 to 8 lbs per acre

15 to 20 lbs per hectare
